Examiner: D. McCracken

Amendments to the Claims

1. (Currently amended) A method for the preparation of an aqueous, stable suspension of

essentially single, non-tangled carbon nanotubes that is ready-for-use, comprising:

adding carbon nanotubes to a water solution of a charged, hydrophilic polymeric material

selected from the group consisting of polysaccharides and polypeptides;

maintaining a mass ratio of said polymeric material to said carbon nanotubes in a range

between 0.05 to 20; and

sonicating said solution including said carbon nanotubes without including further

surfactants wherein the time of said sonicating comprises 5 to 20 minutes; thereby obtaining a ready-

for-use suspension of carbon nanotubes.

2. (Cancelled)

3. (Previously presented) A method for the preparation of dry non-tangled carbon nanotubes

comprising: i) the preparation of an aqueous, stable suspension of carbon nanotubes according to

claim 1; and ii) the removal of water from said suspension.

4. (Original) A method of claim 3, wherein the removal of water comprises evaporation,

lyophilization, or filtration.

5. (Previously Presented) A method according to claim 1, wherein a sum of a concentration

of said carbon nanotubes and a concentration of said polymeric material in the suspension is up to

65% by weight.

(Cancelled)

7. (Previously presented) A method according to claim 1, wherein said polymeric material

is selected from the group consisting of gum arabic, carrageenan, pectin, polygalacturonic acid,

alginic acid, chitosan, combinations thereof and derivatives thereof.

3

- (Previously presented) A method according to claim 7, wherein said polymeric material is gum arabic.
 - 9. (Original) A stable suspension of carbon nanotubes, prepared according to claim 1.
- 10. (Previously presented) A powder of carbon nanotubes, comprising a polymeric material in admixture therewith, obtained by the method according to claim 3.
- 11. (Previously presented) The powder of claim 10, wherein said polymeric material is adsorbed on the nanotubes forming an adhesive interface between said carbon nanotubes and said polymeric material.
- 12. (Withdrawn) Use of the carbon nanotubes of claim 9 for creating a required conductive pattern, comprising: i) providing a solid support, and ii) depositing said carbon nanotubes onto a said solid support in the required conductive pattern.
- 13. (Withdrawn) Use of the carbon nanotubes of claim 9 as a template for the growth of crystals of silica, or a hybrid material of silica with carbon nanotubes, comprising: i) providing a silica containing material, and ii) contacting said material with said carbon nanotubes.
- 14. (Withdrawn) Use of the carbon nanotubes of claim 9 as a reinforcing agent for polymeric matrices, comprising: i) providing a silica containing material, and ii) contacting said material with said carbon nanotubes.
- 15. (Withdrawn) Use of the carbon nanotubes according to claim 14, wherein the polymeric matrix is clastomer.
- 16. (Withdrawn) Use of the carbon nanotubes of claim 9 as an electric conductive connector between two electronic devices, comprising: i) providing two electronic devices, and ii) depositing said carbon nanotubes between said device to create a continuous pattern.
- (Withdrawn) Use according to claim 16, wherein at least one of the devices is a nanoelectronic device.

Applicants: Yerushalmi-Rozen et al. Application No.: 10/667,204 Examiner: D. McCracken

18. (Withdrawn) Use of the carbon nanotubes of claim 9 in a technique that comprises the formation of a thin layer on a surface, comprising: i) providing a solid surface, and ii) depositing said carbon nanotubes onto said surface in a pattern enabling at least a partial cover of said surface by a layer of said nanotubes.

- 19. (Withdrawn) Use according to claim 18, wherein the technique is printing.
- 20. (Withdrawn) Use according to claim 18, wherein the technique is coating.
- 21. (New) The method of claim 1 wherein said carbon nanotubes added to the water solution are as-produced and without chemical modification.
